

Cisco: Network Management

Enhance Productivity and User Satisfaction

Overview

The Cisco network management portfolio offers a broad range of technologies to fulfill a variety of needs. Cisco network management products can help you:

- » Increase business and network resources
- » Save network administrators time
- » Improve business productivity
- » Increase user satisfaction

Unified Communications Management

Networks that deliver data, voice, video, and rich media applications require unified, system-level management. The broad range of products in the Cisco Unified Communications portfolio provide enormous flexibility for applications, rich media collaboration, call control and messaging, and IP communications.

TelePresence Network Management

Cisco TelePresence integrates advanced audio, high-definition video, and interactive elements with the power of the underlying network to deliver an immersive, face-to-face experience for collaboration. Cisco TelePresence network management is essential to the Cisco TelePresence experience.

Performance Assurance

Cisco network management products can help network administrators effectively manage network resources, plan for changes in resource usage, and resolve problems before they affect users. Quick access to configuration menus and easy-to-read performance reports on data, voice, and video traffic helps network operators to monitor trends, plan capacity, and optimize performance.

Routing and Switching Management

Cisco network management products support more than 400 types of Cisco devices with detailed reporting, monitoring, and configuration. They can save network administrators time and effort with improved inventory and configuration management, rapid software deployment, and simplified troubleshooting.

Identity Management

The ever-increasing number of methods for accessing networks makes security breaches and uncontrolled user access a primary concern. Network operators can use Cisco network management products with identity management features to protect systems and information through internal trust and identity policies, access control, and compliance features. The result is security assurance and protection of company profits and assets.

Small and Medium Business Network Management

These Cisco network management products are designed for overcoming the challenges small and medium-sized businesses face, such as making the most of existing resources, maintaining efficiency in the face of competitive pressure, getting return on investment, and managing rapid growth and changes.

Video, Cable, and Content Delivery Management

Designed to be ready for advanced applications, Cisco network management products help ensure high performance and high availability, leading to higher subscriber satisfaction. With Cisco network management products, subscribers can access next-generation services such as IP telephony, video on demand, and interactive gaming.
