

Dell PowerEdge Servers

Reduce complexity and maximize IT resources.

Overview

An essential part of Dell's IT portfolio, Dell PowerEdge servers have set the industry standard for simplifying operations, driving leading-edge price performance and delivering business relevant IT solutions. Dell's award-winning servers easily integrate with one another — and with other leading enterprise software products — to help reduce complexity and maximize IT resources.

Choice in server platforms and features

Whether it is a tower server for your small business, remote location or the sales floor, a rack-dense server for the data center or an ultra-dense blade server to maximize floor space, PowerEdge servers deliver the same great technology in a variety of ways to help meet your needs.

Energy Smart Servers

By combining power-consumption savings with reductions in cooling and power-delivery costs, Dell PowerEdge Energy Smart servers can save businesses hundreds of dollars per server every year. These servers provide additional gains in both power efficiency and performance per watt, helping you maximize server resources.

Innovative server technologies and services

The market quickly followed our lead to industry-standard servers, and we continue to define value by innovating with standards to bring you leading-edge products with the rock-solid base of industry-standard compatibility.

Built with high quality and reliability

Dell's direct model and leading supply chain help ensure quality of the highest degree in our servers. We utilize a 130,000-square-foot test facility to focus exclusively on delivering the most reliable servers possible. And, to further ensure reliability, every Dell server is tested (and re-tested) before it leaves the factory.

Leading systems management

Dell's robust systems-management software and tools - along with tight integration with leading third-party suites - provide a single, flexible management solution across the entire server lifecycle. In addition, strict adherence to industry-standard protocols helps drive greater efficiency.

Tested, Certified, and Ready-to-Deploy Configurations

Let Dell take the guesswork out of deployment with tested and proven configurations for leading applications like Microsoft® Exchange, SQL Server™, Oracle® database, VMware, Citrix XenServer, and SAP®
