

Smart Technologies

Solutions to support every component of a successful implementation.

Overview

The idea of implementing technology throughout a school or school district can be daunting, to say the least. SMART can help you make a sound, cost-effective decision that puts the most intuitive, easy-to-use and best integrated technology products into the hands of your teachers and students. SMART education solutions reflect a proven recipe for success.

SMART Board interactive whiteboard

Since 1991, the SMART Board interactive whiteboard has led the way in engaging students around the world. Combining a touch-sensitive display and digital projector that connects to a computer, the SMART Board interactive whiteboard brings a whole new level of interactivity to any classroom.

The touch-sensitive display connects to your computer and digital projector to show your computer image. You can then control computer applications directly from the display, write notes in digital ink and save your work to share later.

Write naturally

Switch between the pencil, eraser and your finger to write, erase and navigate.

Touch precision

Capture notes easily with the fast and accurate touch response of the interactive display frame.

SMART Table

Meet the world's first multitouch, multiuser table for primary education. The SMART Table interactive learning center lets students get hands-on with collaborative activities – and the more hands the merrier. The SMART Table is a versatile learning center where groups of students can create, explore and discover together on the durable screen. The interface is so intuitive that even the youngest child can play games and plunge into learning activities in no time.

The SMART Table comes with ready-to-use activities that help young children develop a wide variety of skills, from reading to counting to visual spatial awareness. And these interactive applications are all customizable.

Students can sweep shapes across the screen, stretch out their favorite animal and play matching games with partners. Many of the activities are built specifically to encourage collaboration, so students learn to come to a consensus as they explore.

SMART Board with Unifi™ 45 projector

Deliver presentations at their best and brightest with an integrated system that combines a Unifi™ 45 projector, a SMART Board™ interactive whiteboard and an intuitive control panel. Whether the board is connected to a computer or one of SMART's collaboration platforms, you can make notes on the interactive display, write over any application, image or video, and save your notes on a USB key.

Experience the highest levels of brightness and contrast, and the clearest image with the Unifi 45 projector. The high-offset, short-throw projector reduces shadows on the interactive whiteboard and keeps light from shining in your eyes when you present.

SMART Document Camera

The SMART Document Camera displays real-time images of any physical object onto a display device for the entire class to see. The document camera is seamlessly integrated with SMART Notebook, so you can instantly turn objects into interactive content for lessons. You can also use control buttons that are built into SMART Notebook's interface to capture images and then add them directly to a SMART Notebook page.

Senteo interactive response system

The Senteo interactive response system provides a direct wireless connection between you and your students. Now you no longer have to wonder if students understand what you've taught them. They can tell you with the click of a button.

The Senteo system includes a radio frequency (RF) remote for each student in your class, a central receiver, Notebook whiteboarding software and Senteo assessment software, which tallies student responses, records attendance, posts test results and provides individual feedback.
