

Dell: Tape Automation

Automated tape systems for consolidated backup

Overview

Ideal for unattended backup and restore, tape automation combines a high level of performance with user-friendly “no-manual” operation. With robotic mechanisms that automatically swap tape media in and out of drives, tape automation can help administrators back up information while away from the office. Tape automation systems can house multiple tape media cartridges enabling administrators to retain a large quantity of duplicate, backup information for long term storage.

Dell offers three tape automation systems:

- » PowerVault ML6000 PowerVault ML6000 tape library is a versatile, modular and scalable enterprise-level SAN backup solution.
- » PowerVault TL4000 tape library is an affordable, versatile, easy-to-use, automated midrange tape backup solution.
- » PowerVault TL2000 tape library is a dense, automated, easy-to-use library and is a great alternative to tape autoloaders.
- » PowerVault 124T tape autoloader providing a more reliable solution than manual tape drives.
