

# Top 5 Reasons to Build a Simple, Reliable, Automated Disaster Plan

## Implement Data Protection and Disaster Recovery Deploy Services

VMware enables IT to maintain availability with an automated DR solution, cost effectively eliminate data loss, provide reliable BCDR for virtual machines (VMs) and meet RTOs for virtualized applications.

### 1 Move VMs Between Sites with VMware Site Recovery Manager™

VMware vCenter Site Recovery Manager provides automation for every workflow of a disaster recovery plan, from failover and reconfiguration to failback and cleanup.

- Move live VMs between sites over metro distances
- Deliver fast, reliable recovery via automated workflows
- Centralize recovery plans and policy-driven automation

**AVOID  
DOWNTIME**

**AUTOMATE  
WORKFLOWS**

**CENTRALIZE  
RECOVERY PLANS**

### 2 Fast, predictable recovery with vSphere® Data Protection

vSphere® Data Protection can properly protect mission-critical applications using agents

- Streamline backup operations by using vSphere web client
- Get single step recovery
- Minimize backup windows and storage consumption

# 3 Comprehensive, Cost-Effective Business Protection

Rapidly deliver a successful BCDR solution using a validated architectural design with:

- Data Protection Deploy Service
- Disaster Recovery Deploy Service

- Implement and configure a best practice-based, foundational VMware Site Recovery Manager solution
- Reduce disaster recovery costs by up to 50 percent
- Manage high availability, data protection, and DR for applications running on VMs in a production environment

# 4 Deploy a BCDR solution with Professional Services Expertise

Learn the fundamentals of BCDR with the help of VMware Professional Services.

## A SOLID FOUNDATION

- Start with a deployment built for growth
- Jumpstart implementation with a documented architecture

## AN AGILE ENGAGEMENT

- Gain the knowledge to participate in future deployment activities
- Quickly learn and articulate solution capabilities and benefits

## THE RIGHT EXPERTISE

- Receive 16 days of assistance during planning and deployment
- Leverage VMware vSphere and VMware vSphere Data Protection

# 5 Create Positive IT Outcomes

- Reduce the TCO of disaster recovery
- Learn the fundamentals of a BCDR solution
- Test specific product capabilities in a production environment
- Deploy a reliable backup and recovery solution created for VMs
- Assure disaster recovery that meets RTOs
